This link will take you directly to our shop page. **Buy Liposomal Vitamin C now...**

What exactly is liposomal vitamin C?

A liposome is a tiny bubble (vesicle) made out of the **same material as a cell membrane**. Liposomes can be filled with drugs and used to deliver drugs for

cancer and other diseases. The term **liposomal** is used to describe the encapsulation in a lipid form. In the case of vit. C, minute amounts of vit. C are

ered by a lipid layer having a thickness in the nanometer range, thus completely wrapping the vitamin. This way, the vitamin's bioavailability (= the fraction of the administered dose the body can make use of) is increased by a factor of 3 to 5. As is

ent from numerous scientific studies, our body's need for vit. C as a treatment for serious diseases and infections and as a antioxidant exceeds

ifold the previously assumed amounts. This recently, the only way to administer such amounts to our body has been the direct transfer to the bloodstream by means of intravenous
