

## BRANSON 502 CONVERTER SPECIFICATION

**Fig. 17 BRANSON converter model 502/932R**

- Total axial length of the transducer  $L = 120$  mm
- Largest middle diameter  $D_{\text{max.}} = 69.5$  mm
- Front emitting surface diameter  $D_{\text{min.}} = 38$  mm
- Back mass diameter  $D_{\text{back}} = 51$  mm
- Threaded hole in the front mass UNF 20, 1/2" (free hole length 27mm)

**T 1.5 BRANSON 502/932R, Typical Model Parameters Variations**

	In Series Resonance	In Parallel Resonance
<b>Model Parameters for Non-Loaded Converter (Measured on the random, standard-production-quality sample &gt; 100 pcs. of converters, taken after assembling)</b>	$C_{0p} \in [15.3 - 18.1] \text{ nF}, \pm 3\%$ $C_1 \in [3.92 - 4.05] \text{ nF},$ $L_1 \in [17.53 - 18.7] \text{ mH}$ $R_1 \in [1.75 - 4.6] \Omega, \pm 20\%$ $f_1 \in [18435 - 18905] \text{ Hz}, \pm 0.5\%$ $Q_{m01} \in \langle Q_{m01} \rangle \pm 20\%$	$C_{0s} \in [18.7 - 22.05] \text{ nF}, \pm 3\%$ $C_2 \in [79 - 101.53] \text{ nF},$ $L_2 \in [570.50 - 747] \mu\text{H},$ $R_2 \in [94 - 250] \text{ K}\Omega, \pm 20\%$ $f_2 \in [20635 - 20912] \text{ Hz}, \pm 0.5\%$ $Q_{m02} = \langle Q_{m02} \rangle \pm 20\%$

**T 4.6 Piezoceramics measurements and Models**  
**Piezoceramic Ring: Vernitron, PZT8, Ø2" x Ø0.8" x 0.2"**
